UNIVERSITY ADMIT ELIGIBILITY PREDICTOR

Problem statement:

Students need a way to predict the university according to their test scores and academic performance. The main problem involved in this was students spends lot of money on consulting firms.

Students are often worried about their chances of admission to university. The aim of this project is to help students in shortlisting universities with their profiles. The predicted output gives them a fair idea about their admission chances in a particular university. This analysis should also help students who are currently preparing or will be preparing to get a better idea. The model of the project is developed using advanced data sciences and python. The Model uses data of the student like his marks, rank in different exams, grade points, research etc to predict the eligibility of the student to get into a university.
